

EVO BENEFITS

INDEPENDENT LOAD PATH

Completely decoupled left and right shoulder support structures allow full flexibility of the user's torso and waist, such that twisting and bending to the site feel completely natural. The user's back is also completely free of structure, allowing unrestricted airflow and leaving plenty of room for a fall harness.

INNOVATIVE 'STACKED LINK STRUCTURE'

EVO's patented stacked-link structure seamlessly follows the user's arm through the full range of motion while providing proper joint alignment. Extreme positions like reaching directly overhead, across the body, or even into a back pocket for a phone are unrestricted.
